

## Revision questions for NGC2 element 2

As you will have seen, there are lots of lists in this element.

We know from experience that most of the pedestrian / vehicle questions that NEBOSH have asked over the years do require list-type answers.

Presumably the raised profile of 'transport safety' in 'syllabus 2010' will lead to more such questions being added to the NEBOSH NGC question bank.

We intend to add several more questions to those below - please contact us to make sure that you receive these.

*Question 1 Outline the most important factors in the management of (fork)-lift truck operation.*

*Question 2 Produce a check-list of key points for the design and layout of vehicle traffic routes.*

*Question 3 Ditto, a check-list of the key points for pedestrian traffic routes.*

*Question 4 Outline the most important general requirements concerning the conditions of floors and traffic routes.*

*Question 5 People and vehicles, what are the key requirements of The Workplace Regulations?*
